1: Lattimore H-4 (no date) 1950 AI1 Sinkiang AI1

ince. North of the Tien Shan the greatest concentration is also near the Soviet frontier, in the Ili Valley.

The population is divided, economically, between those who live by cultivation and those who depend on animal husbandry. Other occupations, such as trade and handicrafts, are of far less importance. In religion, the people are divided among the Moslem, Confucian-Buddhist-Taoist, Lama-Buddhist, and Greek Orthodox faiths, with an overwhelming predominance of Moslems.[2]

The sedentary oasis Moslems, though less strict in religious observance than many other Islamic peoples, are more strict than the pastoral Moslems, who have retained a great deal of their earlier shamanistic beliefs.

Racial divisions in Sinkiang have rarely been described in scientifically acceptable terms. What little scientific information is available points to a mixture of two main racial elements. One is the racial type designated as Alpine, relatively tall with wavy hair, gray or brown eyes, thin prominent nose, "white" skin, and thick facial and body hair. The other is the racial type known as Mongoloid, relatively short with straight hair, black eyes with the "Mongolian fold," nose broad at the base, light brown skin, slight facial and body hair, and other features characteristic of the peoples of continental eastern Asia.

The settled inhabitants of the Tashkurgan area in southwesternmost Sinkiang, the Tajiks or Sarikolis, are most representative of the Alpine type. They are a small group who speak an Iranian language and are commonly believed to be remnants of the indigenous population of a large part of Inner Asia. Following them in conspicuously Alpine characteristics are the settled people of the Tarim Basin, the Uighurs, who constitute about three quarters of the population of the province. Closest to the pure Mongoloid type are the Chinese and the Mongols, followed by the main

[2] Unpublished figures secured in Sinkiang by Mr. Chang Chih-yi are as follows:

Moslem	3,439,000
Confucian-Buddhist-Taoist	215,000
Lama-Buddhist	63,000
Greek Orthodox	13,000

The linguistic uniformity of the Uighurs is only one aspect of Uighur

their general homogeneity. Almost the whole population is dependent upon agriculture and subsidiary occupations. The chief exception is a group known as Dulani who live in large part by animal husbandry along the banks of the Yarkand and Tarim Rivers. It may be that these are a people in the process of assimilation. Although they speak Uighur they are said to derive from the Kipchak tribe of the Middle Horde of the Kazakhs. (The main body of Sinkiang Kazakhs belong to the Eastern Horde.) Uncertainty as to the precise relationship of the Dulani is increased by the fact that their womenfolk wear a distinctive style of headgear which is quite similar to that used by Kirghiz women. A still smaller splinter of nonsedentary Uighur-speaking people are the Lopliks, who live in the area of Lob Nor and make their living largely by fishing.[21]

Apart from these groups the Uighur population as a whole lives either in farmsteads scattered in the fields or in houses ranged along the narrow streets of oasis cities and towns. The houses usually consist of mud-brick apartments grouped around open courtyards. In the summer much of the daily living is carried on in the open bazaars and on streets shaded by poplar trees and mat-covered trellises.

The Uighurs have a reputation for being indolent and pleasure-loving, with a special fondness for music, drama, and good eating. Ever since the time of Marco Polo the inhabitants of the Tarim Basin have been particularly noted for the casual relations between the sexes. Divorce is extraordinarily easy, temporary alliances are common, and the family as an institution is unstable to a degree unsurpassed among peoples of Islamic faith.

Religion has an uneven influence on the population. The most important positions in the Moslem Church are held by religious leaders who have inherited their posts from a long line of ancestors and most of whom are related to the large landowners and officials who dominate Uighur society. Not surprisingly, therefore, the upper strata of Uighur society include the most ardent supporters of Islam. The poorer classes are indifferent

Kazak

*563 The Kazakhs are
361 [pastoral nomads, herding sheep, goats, horned cattle,
231 horses, and camels. Felt tents are used in the summer, but
342 most Kazakhs live in mud huts in the winter or, in mountain
221 country, in log cabins. Sheep and goats are the economic staple
[436] and serve as the units of exchange value. Poorer people live more
[262] on milk and cheese than on mutton; wealthier herd-owners eat
[291] more mutton. Sheepskins, tanned with the wool on them, are used for clothing; cotton textiles, used for lighter clothing or as a facing for the skin clothing, are acquired in trade. Felted wool is
[825] used to cover the round, conical-roofed tents. The horse, formerly important in war, is honored in Kazakh folklore for its beauty,
[276] bravery, and faithfulness. In modern times the wealthy keep herds of mares in order to be able to drink *kumis*, made by fermenting mare's milk.

*563 Like all pastoral nomads of Inner Asia, the Kazakhs have al-
361 ways had some acquaintance with agriculture. Rich men some-
● 463 times hire Uighurs or Chinese to cultivate grain for them on suit-
221 able land; on the other hand, poor Kazakhs, whose herds are not
241 large enough to sustain them, turn their herds over during the summer to richer clan relatives and work at cutting and storing hay or at cultivating grain or potatoes.

*563 Like other nomads, also, the Kazakhs do not wander planlessly.
221 Summer pastures belong collectively to a group of families form-
[618] ing a clan, identified by a common ancestor (real or fictitious);
361 these pastures lie within a larger territory in which jurisdiction
[592] is claimed by the larger unit, the tribe. Winter quarters more commonly belong to a single family, often the "large family" of several generations living together. The chief migrations are in spring, from winter quarters to summer pastures, and in autumn, from summer pastures back to winter quarters. The most hazardous migration is in spring, when herds are weak after the winter, when lambs are being born, and when spring blizzards may cause heavy losses.

Good winter quarters are much harder to find than good summer pastures; shelter and food must be in close combination. Hence the scarcity of suitable winter quarters rather than the amplitude of summer pastures determines the total population capacity of a nomad territory. In practice the wealthy families

Chinese

lem faith, have also settled down in Sinkiang. Many were first placed in Sinkiang by the Manchu Emperor Ch'ien-lung after he had crushed the Jungar Mongols in the eighteenth century. Later other groups of Chinese Moslems sought refuge in the area as the aftermath of Moslem uprisings in the northwestern part of China proper. These are the Dungans (in Chinese transcription, T'ung-kan). Most of them were from Kansu Province, some from Ninghsia, others from Shensi.

So important is the religious factor in distinguishing between Moslem and non-Moslem Chinese that often they are considered as two distinct peoples. In Sheng Shih-ts'ai's classification the main body of Chinese are designated as "Han" and the Moslem Chinese as "Hui." The former number some 202,000, and the latter 92,000. The term "Hui" is short for "Hui-hui"; and, although it derives from a medieval transcription of the name of the Uighurs, it is applied to all Moslems. The term "Dungan," for the Chinese Moslems — used invariably by the Russians in Tsarist times, and also in the Soviet literature dealing with the small colonies of Moslem Chinese in the Kazakh and Kirghiz Soviet Socialist Republics — is of Turkic origin. Its meaning is obscure, but it may mean "the returners." This etymology is supported by the folk tradition that the Chinese Moslems are the descendants of mercenary troops who entered China from Inner Asia and later settled down and took Chinese wives. Thus when they were moved westward again, into Sinkiang, in the eighteenth century, they were said to be "returning" toward their ancient homes.

Like the main body of Chinese, those of Moslem faith are to be found in many cities of Sinkiang but chiefly in those in the northern part of the province. They are also important in the caravan trade, in the running of inns and caravanserais, and in the military forces. Some have also taken to the land.

Enjoying a virtual monopoly of the provincial administration, the non-Moslem Chinese have upheld the bureaucratic tradition of scholarship and learning. Apart from the official class, however, the Chinese in Sinkiang appear to be no less illiterate than those in the rest of China. Illiteracy is especially high among the

1: Lattimore H-4 (no date) 1950 AI1 Sinkiang AI1
Chinese
Great Russians

In this situation, an important aspect of the mentality of the ruling bureaucracy was the habit, among English-speaking officials, of referring to the non-Chinese peoples of the province in true sahib style as "the natives." That political careerists regarded Sinkiang as a juicy melon to be sliced was further indicated by a comment made by a former high official in the provincial administration:

> One might say that China is like a bankrupt family, which is so embarrassed financially that it can hardly continue to exist, but whose ancestors, fortunately, have left it an estate in the west. If need be, there is still this vast country to fall back on.[23]

In this period the dominant trend of Chinese policy was to disregard the possibilities of securing the adherence of Sinkiang to China by the consent of the peoples of Sinkiang, and to rely instead on a show of force which was formidable for the day but not backed up by the probability of reinforcements for the morrow.

Russians. The 13,400 Russians living in Sinkiang derive almost entirely from *émigrés* who fled from the Bolshevik Revolution of 1917 — most of them during the years 1919–1921 — or from families that were already in Sinkiang when the Russian Revolution broke out. This was a period of intense civil strife in the Semirechie region, now part of the Kazakh S.S.R., where Cossack bands led by Annenkov, Dutov, and Bakich held positions along the frontier until the collapse of Admiral Kolchak forced first one group and then another to cross into Sinkiang. Here they were disarmed and given the choice of remaining in the province or proceeding farther east.

Most of the Russians live in a few urban centers like Kulja, Chuguchak, and Urumchi. As the group with the highest average

463

of technical training in the province, the Russians have been useful both in time of peace and in periods of internal strife. They have served as automobile drivers and mechanics, aided in the training of provincial military forces, and made use of their military experience in actual combat. Their participation in the military struggle on the side of Sheng Shih-ts'ai was an important factor in his victory over Ma Ch'ung-ying in 1934. On this and other occasions, travelers and reporters on the scene, not to mention writers thousands of miles away, have often suggested or flatly stated that these Russians were Soviet Russians rather than White Russians. Both the extent of Soviet influence in the province and the characteristics of Soviet methods of operation have been distorted by such reports.

*563
648

During the period of Yang Tseng-hsin the Russians in Sinkiang managed to get along fairly well. They encountered hard times in the interval from the death of Yang in 1928 to the establishment of Sheng's authority in 1933–1934, and again after his turnabout in policy in 1943. Normally, they lead an existence much like that of other Russian *émigré* communities in China — which means that they have their own organizations, publish their own newspapers, and otherwise attempt to preserve their cultural identity. In general they accommodate themselves to shifting political tides in so far as these do not threaten their very existence. It was a measure of their disquietude that so many of them threw their support behind the program of the Kulja group in opposition to the Chinese administration.

Although the Sinkiang Russian community owed its original formation to the anti-Soviet feeling of its members, this attitude has been considerably tempered with the passage of time, especially as a new generation, not directly involved in the struggles of the civil war period, has begun to assert itself. In line with changes in attitude taking place in many *émigré* communities throughout the world, a growing number of Russians in Sinkiang have taken advantage of the new Soviet policy toward expatriates to identify themselves with the U.S.S.R.

There is now a question whether the Russians in Sinkiang are

households of *chakars*, from whom he claimed both labor services and rent in kind.

When the water finally gets to the field, its allocation to the cultivator is calculated in terms of the flow for a certain number of hours, according to the width and depth of the canal. Millers have the right only to run water over the wheel, and must then return it to the canal. Such matters, together with the maintenance of registers and the supervision of upkeep, are under the authority of an official called the *mirab*, who is locally elected, which means that in his election the locally influential families usually determine the choice. In addition, Moslem religious officials have certain traditional rights, especially of adjudication. Within localities, disputes are most frequent in the spring, when each cultivator is eager to be the first to get water on his land. Between localities, the most important disputes are between upstream and downstream communities. Disputes have been going on for twenty-five years between Yarkand, which is big and powerful, and Merket, which is smaller but rich in the cultivation of cotton. Quarrels can be carried from lower to higher authority. A dispute between the villages of Punak and Malihalihan, in the subdistrict of Chira, was carried up to the district administrator of Khotan, who decreed that for two days each month in February, April, and June Punak should turn over its flow of water to Malihalihan. The intervention of higher authority is a traditional opportunity for the collection of bribes by Chinese officials.

Oases vary greatly in size but closely resemble each other in structure. Every oasis has a village or town, sometimes a walled city at its center. Larger oases may have several such towns. These centers are called "bazaars" and serve as market places for farm produce. In the larger bazaars there are also artisans such as blacksmiths, carpenters, coppersmiths, cobblers, and wheelwrights. Smaller bazaars, which cannot support many permanent shops, have their market day on different days of the week and the merchants and artisans visit them in rotation.

361
443
463

Around the bazaars are the farms, each with its own homestead. An important function of an oasis bazaar is the distribution

361
241
244

162 ten per cent of the people of Sinkiang. It is doubtful if the exact number who live in Sinkiang is known, but Owen Lattimore indicated in 1934, at the start of Sheng Shih-ts'ai's administration, that they numbered one to two hundred thousand and were mostly distributed in the north. These are, in a sense, the "Chinese" with whom the Occident has long 167 been familiar. But often they are descendants of men who came to Sinkiang as criminal exiles. Other Han Chinese migrated there as merchants. Many came as a "gravy train" along with appointment of a leading official from their home region. Tso Tsung-t'ang, who "pacified" the Chinese Northwest near the close of the Manchu Dynasty and was mainly responsible for formal establishment of the province, was a Hunan man and brought many Hunanese into Sinkiang with him. In like manner, Yang Tseng-hsin, who had a long term as governor at the turn of the twentieth century, brought many from his native province of Yünnan. Chin Shu-jen later added more from Kansu.

463 These Han Chinese became mainly the administrators, the soldiers, the traders, the businessmen, the shopkeepers, of their communities. Shansi men have been noted as money-lenders, Pei-p'ing and Tientsin men as general merchants, and Hunan and Hupeh men particularly as dealers in brick tea. Chinese entering Sinkiang from the east did not often become farmers except for a few, such as those who fled from dire poverty in Kansu and Shensi. Usually the Han have located in the larger cities of the province, and the great majority have settled around Tihwa and Sui-ting and some in Kashgar, farther south.

439 Han Chinese organized and maintained much of the trade which passed through Sinkiang from the Occident to the Orient and back in olden days. Theirs was principally a commerce in tea, silk, and spices, and the commodities for which these things were exchanged, such as furs, skins, jade, and rare metals. Due to troublesome factors of distance and topography, as well as of war and politics, this remained for the most part a luxury commerce, and was always too precarious of itself to support the outlying frontier. The "foreign trade," it has been said, went "over the heads" of the native population. It did so because it was largely a Han-Occidental, and not so much Sinkiang-Occidental, commerce.

563 summer comes, they take their cattle way up on the pastures of
361 the mountains. The winter forces them to descend and to spend
233 some months in the more protected valleys.

4. Religion

563 The Kirghiz are Moslems of the Sunna Sect. Their script is
701 Arabic and is known only by noblemen or clergy. The only Moslem
[212] rule which is strictly observed is that of abstaining from eating
[262] pork.

5. Changes under Chinese Communist rule

563 In order to fight illiteracy the new Chinese Communist Govern-
871 ment erected schools for the Turks of Sinkiang in almost all villages,
268 towns and cities. The Chinese claim also that the process of making
177 them sedentary has brought remarkable progress to the Kirghiz.

E. The Uzbeks

563 1. Physical characteristics

[369] Only a few thousand Uzbeks live in Sinkiang, and they live ex-
clusively in the cities. Outwardly they are utterly different from
[142] the Kirghiz and the Kazakhs, since they represent the alpine,
[141] europide and Iranian type of Turk. They show long, narrow faces,
heavy hair growth, brown, sometimes blue, eyes, no Mongolian
fold, sharp prominent noses, white skin, body height 1700 to
1840 mm. Mongoloid features rarely can be found. In most cases
Uzbek are the same physical type as the peasants of the European
Alps.

2. Economic activities

[463] The Uzbeks live as merchants, inn-owners, and craftsmen in
[369] Sinkiang cities. They are more educated than any other Turkish
[891] tribe of Central Asia, since they have absorbed a great deal of
[191] Persian culture. Many Uzbeks speak Persian as a second language,
and Chinese as a third (like the Eastern Turks), while Kirghiz and
Kazakhs know only their mother tongue.

3. Religion

[771] The Uzbeks are Moslems of the Sunna sect. Kirghiz and Kazakhs
call the Uzbeks Sart, which simply means Turks who broke away
from their nomadic way of life and became merchants.

4. Origin and linguistic affiliation

[101] The Uzbeks, living in Sinkiang came from Soviet Uzbekistan.
They received their name from Ozbek, a fourteenth century Khan
of the Golden Horde.

[197] The Uzbek language can be considered as the direct descendant
of the Chagatai written language. Even today the difference between
written Uzbek and the Chagatai language is very small.

F. The Salars

[131] 1. Physical characteristics

The Salars live in Hsün-hua-t'ing on the right bank of the

563 and their thin beards were black. They were of average height
[142] and no corpulent people were observed.

2. Economic activities

[233] The Sarigh-Uighurs are breeding horses, cows and sheep. Their
[556] economic position seems to be very poor. Even the richest man owns
[291] only a few horses and cows. They live in homesteads. Their clothing is Chinese in style.

H. The Tatars

1. Economic activities

Only a few thousand Tatars live in Sinkiang. They represent
[167] a very distinctive Mongoloid type of Turk. Most of the Sinkiang Tatars had fled from the former Kazan Khanate in the Volga region after the Communist Revolution. Some, however, have lived in Sinkiang since the sixteenth and seventeenth centuries.
[463] Despite their small numbers the Tatars have had remarkable in-
[441] fluence as merchants and traders due to their high education.
[871] For a long time they have been the middlemen between the Russian merchants and the Turkic tribes.

2. Religion and literature

[771] The Tatars are either Moslems or Christians. Their litera-
[538] ture is very well-developed and illiteracy is practically unknown.
[212] In Sinkiang they still use the Arabic script.

III. The Mongols of the Northwest

A. The Mongols of Sinkiang

1. General characteristics

The Mongolian tribes of Sinkiang are all Oirats or Western
[167] Mongols. Only the Chahar Mongols, who were transferred from Inner Mongolia by the Manchus, are Eastern Mongols. A small group, the so-called Uriangkhai, are considered to be Mongols, but in reality they are Turks who have adopted Mongolian as their new language.

a. tribes

[619] The Western Mongols (Oirats or Ölöts) of Sinkiang consist of
[197] two tribes: the Koshuts and the Torguts. They all speak a Western Mongolian dialect, very similar to Kalmuck, formerly spoken in the Kalmuck Socialist Republic.

b. religion and economy

[771] All Western Mongols are faithful Buddhists. They are said to
[233] be very uniform in their customs and habits. They are all pastoral
[342] nomads and breed horses, camels, sheep and yaks. They still live
[614] in collapsible tents. The clan system is well preserved.

2. Physical characteristics

563 Employing Eickstedt's terminology, the Western Mongols repre-
141 sent the Mongoloid race, and are one of its purest examples: the
142

22

/Chinese Moslems (Dungans)/

within the railings in the mosque and read the Koran, wear white or green turbans, the leader's turban being more elaborate, with a tassel hanging down the back. Common people wear pointed octagonal caps of white, red or black, the color distinguishing the sect to which they belong.

Some women dress differently from the Chinese women, and wear a sort of turban hat. Ordinarily their dresses are in dark colors, but they may wear gay colors for festivals. According to ancient custom they must veil their faces in the presence of men, but this custom was abandoned long ago.

In cities and towns where the Chinese Moslems dress exactly like the Han Chinese, the men can be distinguished by their physical build and features, but the women are not easily recognized.

d. Occupation

Most Chinese Moslems are business men and traders, and most of them also farm. As farmers they are not equal to the Han Chinese, but they excel in dealing with cattle and everywhere they monopolize the beef and sheep trade. They are also merchants, bakers, workers in jade, money changers, and inn and restaurant keepers.

Outside a Moslem-owned restaurant there hangs a sign displaying a water pot surmounted by a dress hat, and two Chinese characters, Hui-hui. The pot signifies ceremonial cleanliness and guarantees that no pork is used. The hat indicates respect to customers. There are also two Chinese characters on the tea pot, meaning "Pure and True."

Formerly their religion forebade the Moslems to become money-lenders, barbers, fortune-tellers, actors, or servants or apprentices to the Chinese. How strictly the people now observe this taboo is not known.

3. Social values

a. Group spirit

The we-feeling is very strong among the Dungans. The whole group will sacrifice time and money for an individual oppressed by outsiders, and fight for him until justice prevails. Endowed with a courageous nature, the Moslem man is willing to sacrifice his life for the welfare of the group.

This spirit is shown by overt expression in daily social relationships. The Chinese title Lao-piao (old cousin) is applied even to a stranger of the same religious faith. The word old signifies respect; cousin signifies blood relationship. Hence Lao-piao indicates a feeling of closeness toward all members of the faith. Another expression of this feeling is found in the saying that "every Moslem in the world belongs to the same family."

b. Concept of charity

Many of the values in Chinese Moslem society are based upon

S
392 Five tractor repair works were under construction in 1955.
493 Each plant will have sixteen or fifteen mechanized worships. When completed, they will be able to repair as many as 475 tractors and combine harvesters each year in addition to making other farm tools and spare parts.

S
329 There are scattered reports on other industrial developments
398 in Sinkiang, such as: (1) the August First Iron and Steel Plant,
309 (2) the October Motor Car Repair and Assembly Shop, (3) the
256 Urumchi Automatic Electric Plant, (4) the modernized August
288 First Flour Mill, (5) the Khotan Silk Factory, (6) Houcheng
399 Airplane Manufacturing Factory, and (7) more than a dozen
237 animal products processing plants, which process skins, furs
439 and intestines for the purpose of exporting them to the Soviet Union. But detailed information on these projects is not available.

N
S
121 5. Handicrafts.
178 The foregoing analysis concerns itself with the development
463 of modern industries in the Northwest under the Communist regime. But handicrafts still play a very important role in this area as they do in other parts of the country. According to a
463 1951 report, the main handicrafts in the Northwest were as follows:

N
S
[286] (1) Cotton cloth. A side line of the peasant, it was produced practically everywhere in the area. However, the more important producing districts are: 1. Sian, Paochi, in Shensi, 2. Tienshui, Ho-hsi and Min-chin in Kansu, and 3. Turfan, toqsun and Aqsu in Sinkiang. In terms of quantities, the total annual output

S
N
[433] in Shensi is approximately 3,779,670 pieces; in Kansu, 3,505,760 pieces; in Sinkiang, 4,400,000 pieces.

N
S
[323] (2) Pottery. The annual output of pottery in the Northwest amounts to over 4,000,000 pieces. Of that amount Shensi produces
[433] more than 3,000,000 pieces, Kansu, 500,000, Ninghsia, 200,000, and Sinkiang, 50,000. The more famous pottery-producing districts are: 1. Huang-pao-chen and Chen-lu-chen in Tung-chuan, Shehsi, which have been famous since the Sung Dynasty, 2. Yaokai in Yung-teng, Kansu, 3. Ah-kan-chen, Lanchou, Kansu, and An-kou-yao, Hua-ting, Kansu. The production consists mainly of pots, bowls, tea-pots, plates and tea-cups.

N
S
463 (3) Paper. While paper is manufactured in many places in this
289 area, the more important paper-producing districts are: 1. Nancheng (Han-chung), Shensi, 2. Khotan, Sinkiang, 3. K'ang-cheng and Tien-shui, Kansu, and 4. Ying-chuan, Ninghsia. The main varieties are as follows:

(a) The "rough-edge" paper. Usually used as a writing paper,
N
[433] it is produced and consumed mainly in Shensi. The annual output is about 192,490 bundles.

(b) The "Flax paper." It may be made of white or black flax,

and is used mainly for wrapping. The annual output of the white flax paper is about 966,870 bundles, and that of black flax paper is 3,982,480. Part of this is exported to Szechwan, Hankow and Anhwei.

(c) The "improved" paper. It is produced and consumed mainly in Kansu, at the rate of some 300,000 bundles per year.

(d) The "mulberry-skin" paper. It is produced and consumed mainly in Sinkiang, at the rate of some 565,977 bundles a year.

(4) Bamboo articles. A side-line of farmers, they are made in many places, especially in Hua-hsien and Han-chung, in Shensi and Min-hsien, in Kansu. The annual output is estimated as follows: (1)farming implements, 29,280 piculs, (2) sieves, 132,300, (3) large bamboo baskets, 480,000, and (4) small bamboo baskets, 27,000.

(5) Straw hats. Also a side-line of farmers, they are made in many places, especially in Feng-hsiang, Wei-nan, Lin-tung, and Chang-an, in Shensi. The annual output in Shensi alone exceeds 1,377,900 hats.

(6) Brooms. They are made mainly in the districts near Mount Chung-nan, such as Mei-hsien and Chang-an. The annual output exceeds 800,000 brooms.

(7) Straw mats. They are produced mainly in Sui-te, Shensi, Chang-i, Kansu and Ninghsia City, Ninghsia. The annual output exceeds 3,000,000 pieces.

(8) Wooden rakes. One of the main farming implements in the Northwest, they are made mainly in Chang-an, Pu-cheng and Tung-chuan, Shensi. The annual output is about 88,000 pieces.

(9) Iron utensils. They are produced mainly in Pao-chi and Feng-hsiang in Shensi, and Tienshui in Kansu. The annual output is about 76,000 counts.

(10) Carpets. Carpet-making is one of the main handicrafts in Sinkiang. The carpets come in various sizes, up to eight by sixteen feet. The annual output exceeds 10,000 square feet. Of that quantity, some six thousand square feet is exported to India, Afghanistan and Soviet Russia and the rest is sold locally or to other provinces in the Northwest.

6. Evaluation and Prospects.

For the time being, the Communists seem to have concentrated on two things in industrializing the Northwest, one being the cotton industry in Shensi and Sinkiang, and the other being the oil industry in Kansu, Sinkiang and Chinghai. From the economic point of view, these developments are not unnatural, because Shensi and Sinkiang have been famous for their raw cotton, and the oil reserve in China is largely located in the Northwest.

While the present industrial development in the Northwest may not appear so impressive, this area will probably become

3:Cable & French M-5 (1926) 1927 AF13 Northwest China
Sinkiang AI 1

faces were not veiled, and they seemed to have considerable freedom. The flowing, white drapery adds greatly to the beauty of these tall, dark, handsome creatures, and affords full play for coquettish movements and tantalising concealment when once curiosity has been aroused. In the younger women a thick line of black joined the eyebrows over the bridge of the nose, and the face was framed by two long, shining plaits hanging over the breast. The feet were bare, and when indoors were thrust into a heel-less slipper, but when walking out of doors top-boots were usually worn, and sometimes blue velvet socks embroidered with sequins. The whole dress is finished off with a round, brimless cap, which worn over the veil keeps it in place. Hami has its own peculiar style, shape and decoration of the cap, and the initiated can distinguish it in a moment from the designs used in other cities.

Ever since the name of Hami has been known to the European nations, it has carried with it the report of the extraordinary hospitality of its people, and at the present day travellers may still count upon a friendly reception by its inhabitants. This is doubtless due in part to its peculiar geographical position, which might be compared with that of a lonely island in a wide sea, only that here the oasis is an island of green in the ocean of sand. The produce of this terraced and well-watered region is more than sufficient to supply its own population, and its parks, its streams and flowers, as well as the abundance of its vegetables and fruits, amply justified the name of the 'earthly paradise,' by which it had been described to us in Suchow.

The streets and bazaars fascinated us. Here were gathered men from all parts of Asia, mixing freely in the crowded thoroughfares, yet curiously segregated as to their respective trades and lines of commerce.

All the market-gardeners were Chihli men, and spoke of themselves as coming from Tientsin; the banks and money-shops were in the hands of Shansi people; coppersmiths and travelling pedlars were from Honan; and the riveter of broken china was always ready to speak of his distant Szchuan home. Even in the quality of the goods sold the racial divisions were precise. Finely-woven cottons, silks, and the more delicate materials were handled exclusively by the Chinese, but the gorgeous and barbaric striped cottons, carpets, rugs, saddle-bags and all woollen goods were sold by the Turki. The Chantow showed a most attractive *étalage* of golden-crusted breadstuffs, by the side of which the anaemic steamed roll of the Chinese presented no attraction. The fruit and vegetables, though grown by the Chinese, were sold in Turki shops, whose stalls were filled with carrots, egg-plant, and several varieties of French beans, including one in which the pod was over a foot long and circular in shape. Vegetable marrows were in such profusion as to warrant an old name for Hami—'The Oasis of the Gourd.' Onions, juicy green peppers as large as oranges, celery, lettuce and cucumbers were in profusion, but peas and broad beans were not grown by the Tientsin market-gardeners, they were sown in the fields by the Chantow farmer, and viewed not as vegetables for the board of the epicure but as fodder for animals.

The season was too early for much fruit, but a small apple was procurable, and the first ripe melons were in the market. The best quality of melon known in Turkestan bears the name of 'Hami,' and is a large fruit of the netted order, the flesh being firm and sometimes white, but more frequently orange-tinted, and of superb flavour. The water-melon (*Citrullus vulgaris*)

We left Muleiho as soon as the weather permitted. 272
Our Shansi friends were round early to see how we had fared, and to bring us a parting present of a slab of brick-tea, one foot wide by one and a half feet long, and two inches thick—a most decorative object, being stamped with handsome patterns. Brick-tea is much used in the North-West. A small chunk is broken off and boiled in a kettle of water, making an infusion which is of a pale colour and nearly tasteless. The bricks are made from the used leaves of the tea-shops, sun-dried and pressed into a cake.

The next two days took us past Chitai—'Great 361
Height'—where we stayed in the suburb, the town 751
itself being nothing but a mass of ruins inside a good castellated wall. We took our next stage by day, crossing the area which had received the full force of the cloud-burst on Sunday night. On every hand we saw the traces of the havoc wrought. Bridges were swept away, trees uprooted and crops ruined, and we were told that a large number of cattle had been drowned, as the rushing mountain torrent burst its bounds and had overtaken the herds before their owners could get them to a place of safety. From Chitai we 361
came to Kucheng—'Ancient City'—which unlike Hami [133]
is not surrounded on all sides with fertile land, but is approached over a wide, sandy and treeless plain. From out of the howling wilderness we stepped direct into a large town, which appeared to us a veritable metropolis. Many large shops showed a splendid 366
assortment of such glittering wares as the Chinese love— 443
china cups and teapots, perfumes and scented soap, silks and cottons, clocks and hair-clasps. The tailors 463.
sat at their shop doors working Singers' sewing-machines, the Moslem bakers piled the hot rolls on counters as they drew them out of the brick oven, and the vege-

tables were finer even than those of Hami. One street was given up to the furriers, who worked in rather showy but inferior skins, the best quality not finding its way to Kucheng. Another street held the silversmiths, while here and there a photographer or watchmaker advertised himself as being the branch shop of a Peking firm. The whole business quarter was gay and prosperous, but the Turki shops were fewer in number and inferior to the Chinese. The importance of Kucheng lies in the fact that it is situated at the terminus of the great desert trade-route to Peking, which passes by the Yellow River to Paotowchen and Kweihwating. These two important marts of North Shansi are 1500 miles from Kucheng, and the camel caravans habitually travel to and fro carrying the highly-prized bazaar wares over the desert. In normal times the camels are always on the move, though they may take from three to six months to accomplish the journey, but at the time of our visit this route was closed owing to the activity of the War Lords. We were told that whereas before 1914 the British and German goods were the most highly valued on the market, at the present time Russian and Japanese wares had superseded them. It was interesting to find, however, that the Moslem woman's veil which we desired to buy bore a stamp in the corner: 'Made in Manchester.' We stayed in a Mohammedan inn, where we had the immediate *entrée* to the women's quarters, in which our landlord's wives lived in seclusion. The family was very strict in its observance of Islamic rites, and five times a day the prayer-hour was observed. Every morning before sunrise and at evening twilight a long and elaborate liturgy was recited by the head of the house. The purifications which preceded the prayer entailed a washing of face, hands, arms and feet in running water.
